

INDUSTRIAL MACHINE
AND PRODUCTION LINE
PROTECTION EXPERTISE

Created in 1992, located in France at 1:30 by train from Paris, APC is a plastic material use expert. We design service proven solutions to ensure full compliance of industrial machines with safety standards, provide personal protection, design work spaces and operator comfort solutions.

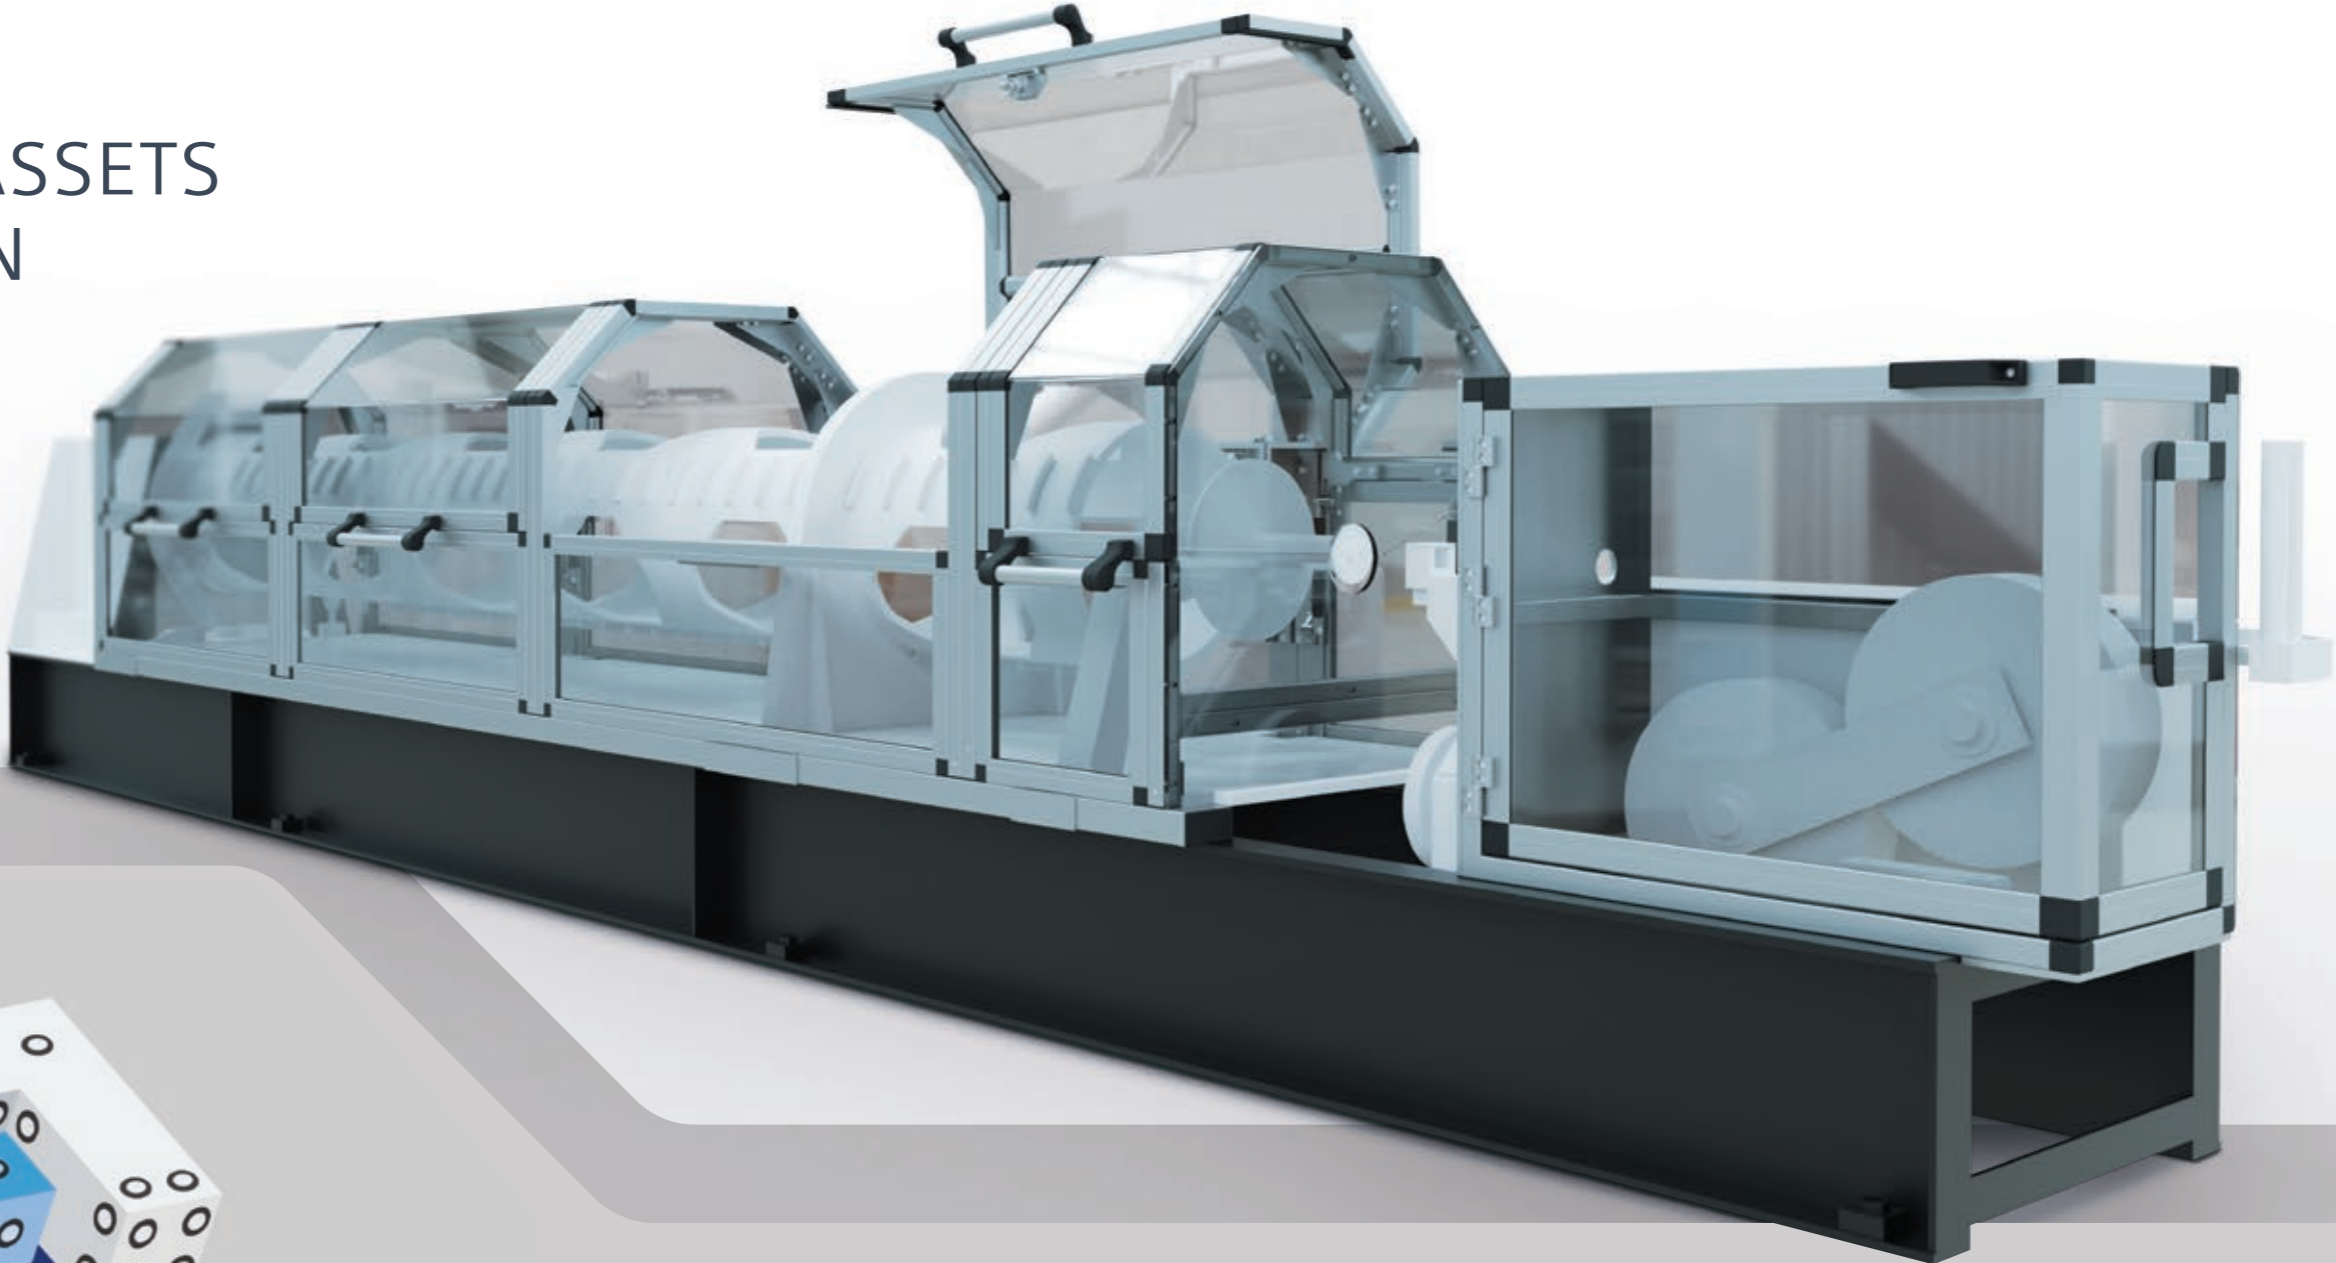

At APC, we master the complete value chain, from project initiation, through design, production, installation on the final site and qualification assistance.

We are local growth players because we have continuously evolved the business since its creation. We assign a significant proportion of our resources to deploying new technology and training our staff.

VALUE CHAIN

PROTECT YOUR MACHINE ASSETS AND PRODUCTION LINES

MEASUREMENT TAKING

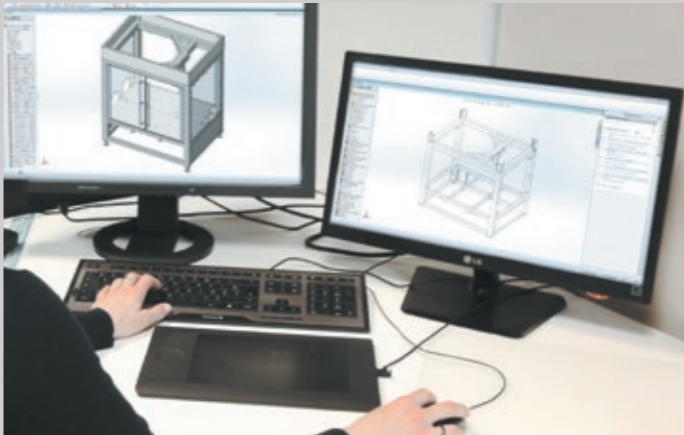

- On-site measurement-taking
- 3D machine scanning
- Run mode understanding
- CAD design
- 3D file sharing
- Creation of drawings

EXCLUSIVE:
ON-SITE 3D SCAN

DESIGN

- Safety report analysis
- Consideration of operator constraints
- Machine sound-proofing
- Production drawing preparation
- Choice and sizing of materials
- Choice of electrical safety sensors and interlocks

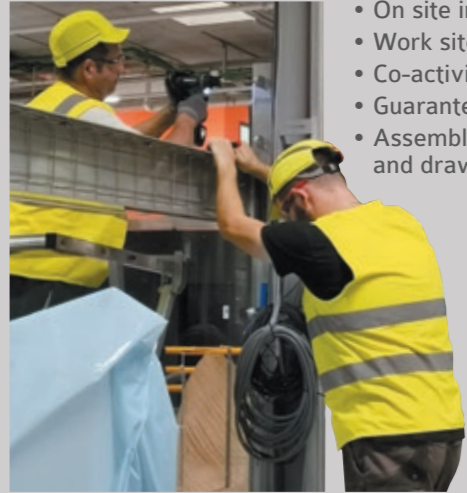

BESPOKE DESIGN

Thanks to our plastic material processing know-how (machining, bonding, shaping, folding, ...) and our aluminium profile know-how, we support our customers in finding new and innovating solutions in many fields: personal protection, improvement of work conditions, Plexiglass furnishings, machine sound-proofing, etc.

CREATION OF GUARDS TO CUSTOMER DRAWINGS

If you have already completed your project ownership, we will take care of your project management. Give us your drawings and recommendations, we will set up your guard production process. If you produce your machine protections internally, we can deliver your guards in kit format.

ON SITE ASSEMBLY

- On site installation
- Work site safety
- Co-activity
- Guaranteed results
- Assembly instructions and drawings

QUALIFICATION

To comply with safety requirements and standards, we offer you our expertise throughout your machine and production line compliance process.

- Pre-project safety inspection
- Close collaboration with certification bodies
- Electric safety device and interlock selection
- Certified raw materials
- Audit preparation assistance

BAR MACHINING SYSTEM
To machine and mill aluminium and plastic profiles up to 6 m long

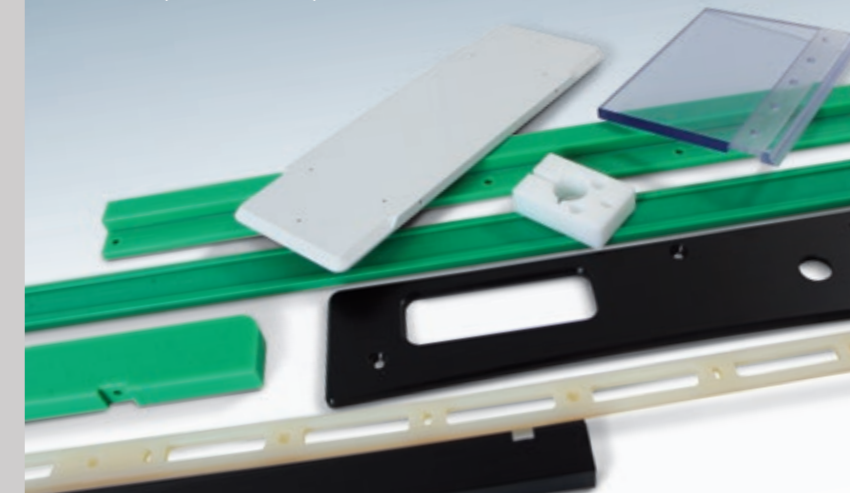

PROFILE MACHINING

We have exclusive access to the Milpass range of aluminium and stainless steel profiles. Cutting, folding, drilling, etc. requiring very high precision. In 2021, APC invested in an ELUMATEC 122/70 machining system that is used to automate the production of the different elements flexibly and reactively.

THERMO-PLASTIC MATERIAL TRADE AND ON-DEMAND MACHINING

As we have a wide variety of materials in stock and are well-known to manufacturers, We deliver top responsiveness for all projects:

- Cutting, machining, folding, bonding, ...
- All thicknesses of clear materials
- Plastic semi-products in sheets, strips, sticks, bars, ...
- Specific technical materials
- Recycled and recyclable thermoplastic materials

Applications Plastiques & Composites
